Please carefully read and observe all instructions and warnings contained in this manual or on the product. Improper installation may damage the device and void the warranty.
IMPORTANT
Installation should be performed by a qualified service person and conform to all local codes.

DESCRIPTION
Model ZC-OHS is a tamper resistant indoor or outdoor housing that is designed to accommodate all CBC ZC-D5000 series mini-dome cameras. This housing will accept the following camera models:

MAJOR FEATURES
• Polycarbonate dome with rugged cast aluminum housing withstands the blow from a 10 pound sledgehammer
• O-ring sealed housing meets IP66 standards for use in virtually any weather conditions
• Quick-Lock tabs for easy installation and removal of camera module
• Built-in conduit access in dome base accepts 3/4” conduit
• Quick and easy installation utilizing 6 different dome camera options
• Housing mounts directly to any wall, ceiling or 4S Electrical box.

INSTALLATION
1) Standard Housing Installation
   a) **CAUTION: Do Not Remove Screws. Loosen** the 3 set screws from the dome base using the supplied key and remove the dome cover (see **FIGURE 1**). The O-Ring makes a tight seal, so a thin-bladed screwdriver may be needed to separate the dome cover from the housing base by using the pry slots to separate.
b) Using a minimum 1/2” drill bit, drill the cable feed hole and feed the video/power cable through the mounting surface or attach 3/4” conduit fitting to the hole in the side and seal with pipe thread tape (see Figure 2).

c) Holding the dome against the mounting surface, mark and drill the 4 mounting holes (see Figure 3). Fasten the base to the mounting surface using the supplied #8 Phillips screws, rubber washers and plastic anchors (anchors for dry wall only). (see Figure 1).

Depending on the mounting surface other hardware may be needed. Add rubber gasket seal to the back of the housing for sealing on a flat surfaces. For uneven surfaces a bead of silicone sealant is recommended.

Note: If using other mounting hardware; apply silicone sealant around the inside of the 4 mounting holes before inserting screws or bolts to prevent damage from leakage.
2) Install ZC-D5000 Series Dome Camera
a) Remove the two camera mounting screws (see Figure 4).
b) Place the camera base into the housing, making sure that the 6 power and video wires feed through the hole in the camera base.
c) Rotate camera slightly to lock in place, then install 2 supplied mounting screws to secure camera to the housing base (see Figure 3 for locations).
d) Make the wiring connections in accordance with the instructions below.

![Camera Mounting Screws (x2)](image1)

3) Connect Power

**IMPORTANT**
Make wiring connections only after it has been determined that power has been disconnected. Failure to do so could lead to permanent damage to the camera and void the warranty. The ZC-D5000 Series Dome Cameras will accept either 12 Volts DC or 24 Volts AC power supply marked class 2. If using 12VDC, be sure to determine the polarity before connection.

The Red wire connects to 12VDC (+) Positive terminal and the Black wire connects to the Ground terminal (see Figures 5 & 6). When using 12VDC, use only a regulated power supply with a minimum 500mA output, (model C12DCR-500 recommended). For 24VAC input, connect the Red and Black wires to the 2 power input terminals.

![Video Signal with 2-pin connector](image2)
4) Connect Video
Connect the White connector to the Video-Out Terminal on the board. (see Figure 5).

Note: If necessary, needle nose pliers can be used to make power and video connections.

NOTE: Special focusing Instructions when using 5-50mm dome.
If the 5-50mm lens is set to a focal length of 20mm or greater, the dome cover must be held in front of the lens while focusing to obtain proper focus.

5) Install the Desiccant Pack
After the camera has been installed, attach the supplied desiccant pack to the camera.

a) Remove the desiccant pack from its storage bag.

b) Remove plastic from the double-sided tape and attach to the inside of camera bracket (see Figure 7). The desiccant pack is used to absorb any moisture trapped inside the dome during installation. To avoid excessive moisture buildup, it is recommended that the camera not be installed in rainy or excessively damp conditions. The desiccant pack can be replaced if condensation develops inside the housing. Replacement packs and other replacement parts are available through CBC (AMERICA) Corp.
6) Re-Install Dome Cover
   a) Place the dome cover on the housing base.
   b) Push the cover lightly onto the base, rotate the liner or dome cover to align with lens and tighten the 3 tamper resistant set screws (see Figure 1) until the cover seals tight against the housing base.

CAUTION: Do Not Over Tighten!

Changing the Polycarbonate Dome
The ZC-OH5 housing is supplied with a clear dome and black plastic liner. If damaged, the dome can be replaced by removing the 4 flat head screws inside the dome cover. Due to a tight seal, some pressure may be required to the top of the dome to break the seal. After installing the new dome, replace the retaining ring and tighten the 4 flat head screws until the retaining ring is flush with the adjacent surface.

Maintenance Notes
If the housing cover is opened frequently or if the O-Ring dries out, apply a light coat of good quality silicone based grease to the O-Ring to maintain a watertight seal. Replacement O-rings and other replacement parts are available through CBC (AMERICA) Corp.

Options
1. Pendant Mount
   A pendant mount adapter is available for applications that require the dome to be dropped from the ceiling from a pipe. The pendant mount adapter accepts a 1” NPT pipe thread (Model ZC5-PM2).

2. Wall Mount
   The wall mount combines the pendant mount with a wall mount bracket for various wall-mounting applications (Model ZC5-WM2).

3. Heater
   A 24VAC heater option is available. Contact CBC (AMERICA) Corp. for details and specifications.

4. Housing Color
   Different housing colors (either painted or anodized) are available for a minimum order lot and custom paint charge.

*Temperature Range recommendations are based on proper installation and maintenance procedures outlined in this manual. Improper installation or maintenance may alter the camera’s operational limits, damage the device and void the warranty.

*Design and product specifications subject to change without notice.*
**Disposal of your old appliance**

1. When this crossed-out wheeled bin symbol is attached to a product it means the product is covered by the European Directive 2002/96/EC.
2. All electrical and electronic products should be disposed of separately from the municipal waste stream via designated collection facilities appointed by the government or the local authorities.
3. The correct disposal of your old appliance will help prevent potential negative consequences for the environment and human health.
4. For more detailed information about disposal of your old appliance, please contact your city office, waste disposal service or the shop where you purchased the product.
