GXiSERVER

Standalone AI Driven Video Analytics Application Service

GANZ GXiServer is an intelligent software suite, designed to integrate within or alongside VMS, NVR PSIM platforms.

Features

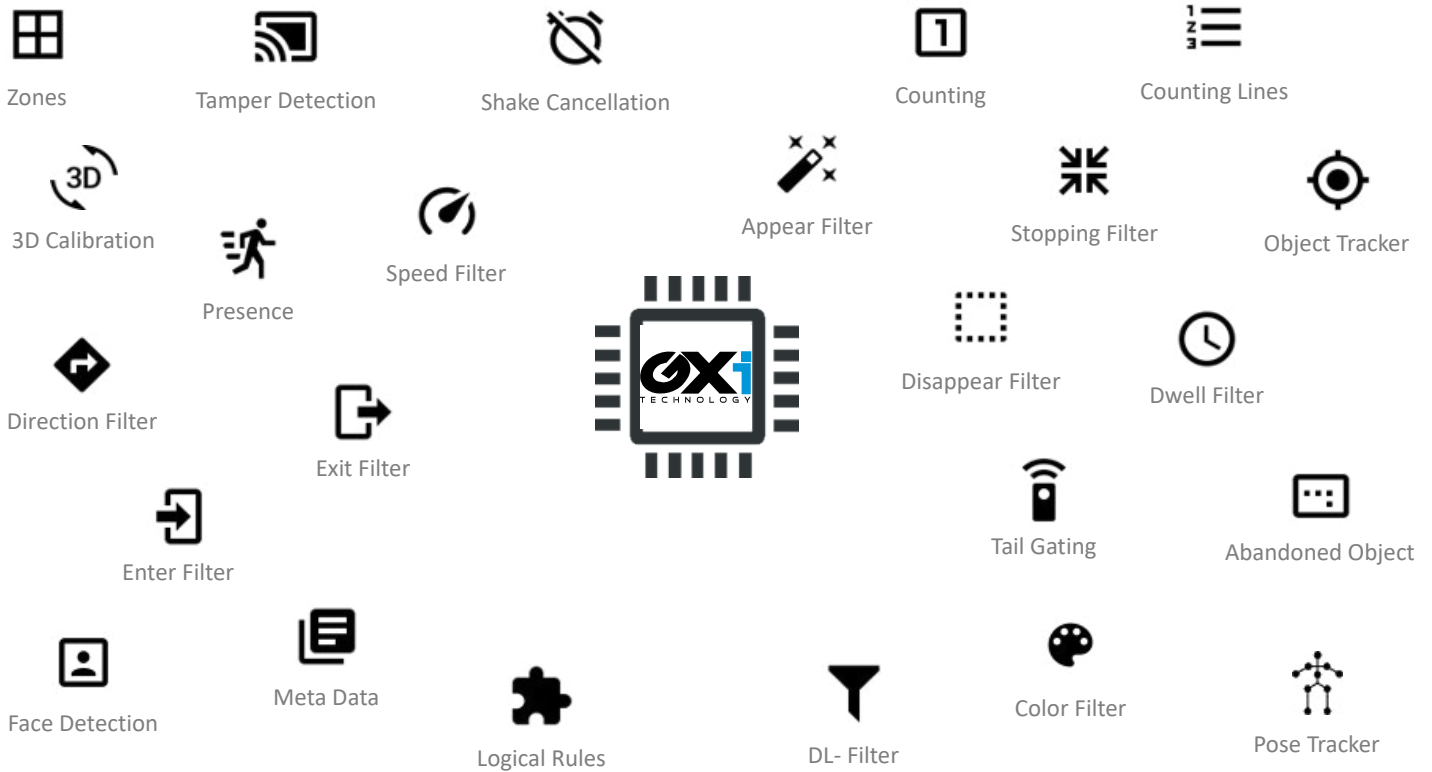

- Add lightweight Deep Learning filter
- Software Analytics License offered in 3 levels
- Scalable up to 64 channels.
- Dependent on server hardware
- Supports a spectrum of scenarios
- Logical Rules
- Supports Microsoft Windows & Linux OS
- Supports Intel X86/64 & ARM Platforms
- Easy retrofit of existing camera installations
- Integrate with or alongside most VMS, NVR, & PSIM platforms
- Common rules, set-ups, UI across the range of platforms

Deep Learning Reduces False Alarms

The deep-learning based filter can be used to augment the current GXiServer classification engine based on calibrated scene or be used as a stand-alone module.

It more accurately distinguishes between true events and false positives (e.g. spiders, car headlights, environmental changes). It does not require camera calibration, which decreases the installation and maintenance burden.

Analytic Platforms

The Ganz Bridge Embedded hardware appliance running GXiServer

GXiServer (Windows/Linux) Standalone application service run on servers

SDK (VMS / Applications) Integration of GXi Technology's analytics into 3rd party applications and embedded systems
